WASP FREEZE®

INSECTICIDE

Operational Benefits

This original Wasp Freeze® formulation provides a knockdown that is so quick no stinging pheromone is released, thus reducing the chance of being stung. It contains no ozone-depleting substances and the active ingredients, *d-allethrin* and *d-phenothrin* provide a rapid knockdown and good residual control in the nest.

Wasp Freeze contains a coarse jet with large particles that optimises the amount of active ingredient delivered to the pest which further improves effectiveness against both adult wasps and larvae.

It has proven performance to knock down wasps within 5 seconds. Extensive field trials against active common wasp nests have consistently shown knockdown of exposed wasps within five seconds and complete cessation of all activity 30 minutes after treatment, with total disruption of any defensive response.

Offering particular value for money, it is available in 500g aerosol cans and is sufficient to treat multiple nests.

Scan with your smartphone QR Reader to watch the Wasp Freeze video.

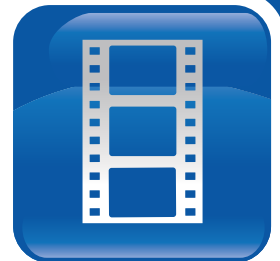

Wasp Freeze provides a rapid knockdown, eliminating wasps on contact in as little as 5 seconds.

Perfect for safely reaching nests in far-away corners, Wasp Freeze is effective from up to 5 metres away.
